/68 cont./

755 884 86 hopping, etc. The other members of the tribe pay no attention to such prayers and magic performances. Only the chiefs and their student helpers sometimes listen more carefully. Then it sometimes happened that Hewemão would shake his head and tell me that this or that man was praying all wrong, he had undoubtedly not paid sufficient attention during the lessons. If he notes such deficiencies often, it may happen that he will request the man in question to take part in another two-month training course in order to increase his knowledge.

756 171 There is evidence that this type of training, in similar form, occurs among the Jívaro, where prospective shamans receive instruction for one month, in the course of which the neophyte must also fast and drink various drugs, including tobacco juice and cayapi. The training costs, however, are very high (329).

329. Stirling, 1938, pp. 117/18.

756 884 For the young Surára and Pakidái men the instruction is free, to be sure, but mandatory.

834 833 j) Sex life

The behavior of the sexes toward each other in public is extraordinarily decent. Kisses, embraces, or other manifestations of affection are unknown to them. Physical demonstrations of love are carried out in the forest, away from the maloka, or in the dark of night when it is assumed that the other members of the tribe are sleeping. Hunting expeditions also offer a favorable opportunity, for the wife occasionally accompanies her husband. [595] Since some men have two wives, they go hunting in turn with the first and with the second.

843 837 [593] If a woman is pregnant, she is supposed to come together frequently with other men, for it is believed that only through this can her child become stronger. It must occur in all secrecy, however, for if her husband surprises her during coitus with a lover, he challenges the latter to a stick duel, and she herself will be abused by him (330).

330. Becher, 1959, p. 162.

/217 cont./

606 The husband helps economically the family of orientation of his wives, supplies them with produce from the conuco, but dealings with his wife's parents are reduced the most indispensable ones. When he meets his mother-in-law on the path, he changes his direction immediately, does not greet her, and would not dare to speak to her for anything. Between father-in-law and son-in-law there exists a cold friendship from which all manifestations of cordiality are absent. The same taboo exists between parents-in-law and daughter-in-law.

836 The Sanemá of the Erebato assured us that an unmarried young man could have sexual relations with all the unattached girls of his group and that very often the girls are the ones who [584] take the initiative in this. When a boy is attractive, he joins up with one or two girls, who /218/ in all frankness and good faith ask him to stay with them for a few nights more, offer him food, and hope that he will resolve to ask one of them to marry him.

593 It seems that in general women do not abandon their husbands and confidently expect the spouse to behave in the same manner and not have extramarital sexual relations.

593 Frequently angry fights arise in the family out of passional motives, to the point where the man no longer tolerates it and leaves the rancheria forever and eventually marries another woman in a distant pueblo.

595 Usually, only older men have several wives; polyandry is not permitted. Widows, as a general rule, marry a brother of the deceased husband, who takes his nieces and nephews under his protection. This custom does not cause any great problems, since the brother of the deceased has already had sexual intercourse with his sisters-in-law before marrying them, for he has always considered them as possible wives. Nor do the children find it difficult to accept their new father, whom they have always called "father" and he has called them "children." In this way the Sanemá (and also the Waica, Surará, and Pakidai) are a society which allows polygamy, the sororate, and the levirate.

722 /152 cont./ One day, that is to say after the aldea was ready,
499 the Bisheasetjeti also crossed, the bridge was /153/ cut by them near the bank. Guards were placed to keep a lookout for the enemy, should he try to repair the bridge and cross it.

727 Much after this, a raid was made on Liacoatjeti by some
[721] of the Bisheasetjeti and the Majecotjeti /sic/; "Jaiyeota," one of the Majecototjeti, shot one of them and killed him. A boy of four or five years of age was captured. One of the men from Majecototjeti, "Ushiu," took the boy and cared for him. All of the children were bothering the little one, calling him enemy and acting as if they were going to shoot him. One day, after this had gone on for a while, a young man from Bisheasetjeti shot the child near the water spring. He shot the arrow so hard that it passed through him. Ushiu gave the child a funeral, but none of the other inhabitants of the aldea came to the "lloro" /weeping/, because they said, "After all, he was an enemy."

628 The two aldeas had some bad times together. Often, when
721 they were in the forest, they had to come running back, feeling
578 sick. Frequently their ribs were showing. During this time
[164] several died of a strange fever which kept the victim hot day and night without relief. Others were very sick with the fever, and it
[361] was feared that they would also die. The two aldeas of Bisheasetjeti and Majecototjeti lived together for a year, until those of Bisheasetjeti made a new "farm" /granja/ down the Orinoco, on the other side of the Manaviche River. When they separated, friction caused by some women had reached such a point that the Majecototjeti summoned the Macolimutjeti, and both of them made a raid on Bisheasetjeti to recover the wife of a Majecototjeti who had gone to live with a Bisheasetjeti. One family did not take part in this raid and by its friendly and frequent visits prevented the two aldeas from shooting at each other.

628 Another incident of friction was that a young man from
578 Majecototjeti stole a Bisheasetjeti woman from her husband.
837 When the husband had almost persuaded his wife to come back with him, the Majecototjeti man shot him in the back with a bone-pointed arrow and kept the woman. The Bisheasetjeti man was seriously wounded, but recovered.

phenomenon: the feuds that lead to the splitting of villages and the cause of fighting between villages are largely the result of the shortage of women.

Within villages, then, the bachelors and those men whose wives are either pregnant or are nursing children constantly threaten village stability by seeking liaisons with the wives of other men. The discovery of these liaisons usually leads to violent fighting between the group of close relatives of the woman's husband and that of her lover; and this frequently causes the village to split. The larger the village, the more likely it is that such liaisons will develop and that the subsequent fighting will lead to fragmentation of the village.

Village size, then, is limited by the capacity of the kinship network to regulate internal feuds, and by the nature of the actual or current warfare pattern of the neighboring villages. As the village grows in size, the incidence of extra-marital affairs and club-fights appears to increase, while the ability of kinship to regulate the affairs of a multi-lineage village diminishes in proportion. Villages then split into smaller groups that comprise two or more small, cohesive, intermarrying local lineages; each group establishes an independent village and enters into marriage alliances with other villages. The prior existence of hostilities with other villages may delay the split, but does not prevent it. In short, the relationship of Yanomamö village size to village solidarity nicely illustrates Leslie

*621 578 241 escalate, the factions involved usually use the interlude between a club-fight and actual killings to establish separate gardens.

*621 *628 241 361 722 Occasionally, however, a village suddenly becomes embroiled in a war that it has not expected, or fighting within the village immediately involves shooting to kill. Then the only recourse for the group is to take refuge with an ally and subsist on the produce of the ally's garden. If the critical situation develops out of an intra-village dispute, the smaller of the contesting factions is forced to flee to another village where it has friends or relatives.

If all the members of a village are forced to take refuge in another village, they proceed to make their own garden apart from that of their hosts; then, when the garden begins to produce, the refugee group moves to that site to [583] [582] [391] live. They do this because the price of protection is always measurable in terms of the hosts' demanding access to the women of the guests, either as spouses for their own men or simply as temporary sexual partners.

Twice during the lifetime of my oldest Bisaasi-tedi informants their group was obliged to flee to an allied village to escape the raids of powerful neighbors, raids that resulted from the development of intensive hostilities before the group could establish a new garden of its own elsewhere. On both occasions the refugees lost a number of women to their protectors, and in neither case did they receive wives in return. Indeed, on the second occasion, the hosts planned *628 726 574

838 unmarried young men in Bisaasi-tedi were having homosexual
883 relationships with each other, but no stigma was attached to this behavior. In fact, most of these bachelors joked about it and simulated copulation with each other in public. The men involved in these affairs, however, were hardly more than teenagers; I have no cases of adult men satisfying their
836 sexual needs by homosexuality. By the time a young man is
837 20 to 25 years old, his sexual interests focus on women, and he is constantly attempting to establish liaisons with women,
[664] whether or not they have husbands. In some respects, a man's
[627] status depends on his ability to successfully carry on
[578] clandestine affairs which, when discovered, force him into
[104] club-fights. The number of scars he has on his scalp is a
[554] measure of his sexual prowess.

573 Rarely, a man will permit his brother to have sexual
835 relations with his wife. In the village of Mõmaribõwei-tedi
732 there is an achodroplastic dwarf, Yoyosiwã. Being 'ugly' (wanidiwã), he can not find a wife. One of his normal brothers permits him sexual access to his own wife. In general, however, men are jealous of their adult brothers
595 and do not permit such affairs. Occasionally, if a man has
593 several wives, the wives themselves may put pressure on the husband to give one of them to the man's younger brother; co-wives, too, are capable of being jealous of each other and often resent having to share food, particularly meat. Several young men in Bisaasi-tedi have obtained their wives from older brothers because the latter could not keep peace

595 in the family. The transfer of the woman from the older to
593 the younger brother was, in some of the cases, quite gradual. Thus, Kaobawä gave Hantoami to his younger brother, Shadadama, because his other two wives complained about not having enough game to eat. Kaobawä continued to have sexual relationships with Hantoami after she had become Shadadama's wife, and sired two of her children.

*629 Another form of permitted affair is called nohimou--
722 "to befriend" or "act like a friend" to a woman. This type
836 of relationship might occur, for example, when the members
• 837 of a village have to take refuge with an ally. The allies invariably enter into nohimou relationships with the women of the refugees. The refugees are reluctant to give their women as wives to the men of the host village, but they are obliged to permit them to have sexual access to the women. These kinds of affairs also develop within a village between a man and the wife of a friend, or, with single girls. Again,
*629 when men go on visits to other villages and bring trade goods,
574 they frequently are permitted to have affairs with the hosts'
438 women, particularly if the men have brought goods that are
897 highly prized by the hosts.
836

835 Incestuous affairs between classificatory siblings are quite common.[1] One of my female informants used husband

[1]Incest, to the (male ego) Yanomamö, is any sexual relationship with a member of one's lineage or with mother, mother's sister, mother's mother, and mother's sister's daughter. Failure to avoid a woman of the mother-in-law category is also incestuous in the eyes of the Yanomamö, but only if the woman is sexually active. Menopausal women of

835 601 183 investigated discrepant kinship usage I found that the terminology changed because of incestuous relationships between my informant (or his close kinsman) and the members of the local lineage in question. I have not investigated all discrepant usages, but the high incidence of the terminological aberrations suggests that incest is widely practiced.

835 601 183 582 [162] [562] Incestuous affairs and marriages occur largely because of the woman shortage. I have already mentioned that Ishiweiwä of Patanowä-tedi married his three 'granddaughters' because he could not find a wife of the appropriate category. A similar situation occurred in Bisaasi-tedi. Reromawä, one of the important men in the lower group of Bisaasi-tedi, has redefined a number of his classificatory daughters as sisters,[1] thereby making it possible for his sons to marry their children, otherwise incestuous marriages. His oldest son, Bäkäböwä, technically married his FaDaDa, but because his father had redefined the mother of Bäkäböwä's wife as 'sister,' the marriage was appropriate within their marriage rules.

• 837 *621 578 [721] The woman shortage is remedied by illicit affairs within the village. These affairs are the major cause of feuds and village splits. During the 15 months covered by my field work five club-fights occurred. Four of them were over women who had been caught in illicit affairs, and in one case, the village split into hostile factions that began

---

[1] See Chapter 4 for detailed discussion of this.

raiding each other.[1]

That the shortage of women is the basis of internal feuding is illustrated by a practice recently adopted by members of the New Tribes Mission working in the village of Kosholowë-tedi, a small village on the Padamo River. The missionaries had a major problem with club-fighting within the village, most of which developed out of sexual liasons between married women and married men. The missionaries began an active campaign aimed at changing the coitus taboos during pregnancy and lactation. They were successful in their efforts, and the major result was that fighting was almost completely stopped. (Another result was a sharp increase in births.)

Village size and composition have an effect on the number of sexual liaisons within a village, as illicit affairs are more difficult to discover in large villages. The Bisaasi-tedi and the Monou-tedi, as can be seen from Table 1, have less of a woman shortage than the other villages. Nevertheless, fights over women do break out in these villages. One of the clubfights I witnessed took place between two groups of Monou-tedi men in the village of Bisaasi-tedi. One of the Monou-tedi men had wanted to carry on an affair with the wife of Konoreiwë, another man of his village, but was unable to do so while the Monou-tedi lived in their own village. Once when the Monou-tedi moved to Bisaasi-tedi to

[1] See Chapter 5, Tables 5 and 6, for a summary of the causes of village splits and hostilities.

avoid the raids from the PatanowÃ-tedi, the man in question used this opportunity to have an affair with KonoreiwÃ's wife, presuming that he would not be discovered because the village was filled with people. He was discovered, despite his discretion, and challenged to a duel by KonoreiwÃ. The entire village participated in the club fight. KonoreiwÃ punished his wife by hitting her in the mouth with a glowing fire brand, severely burning her lips.

Finally, and most drastically, the woman shortage is remedied by raiding other villages to abduct women. This, however, is war. The ever-present possibility of this occurring, however, is a constant threat to the stability of political alliances, for allies occasionally turn on each other with the intent of seizing females. It is largely for this reason that allies cede women to each other peacefully by contracting marriage alliances. In November 1964 the PatanowÃ-tedi arrived at Bisaasi-tedi to participate in a feast. This was the first time the groups had gathered as groups since they separated from each other on hostile terms in ca. 1948. They intended to make peace at this feast, but a party of men from Monou-tedi, a village that also formed part of the group before the 1948 split, arrived uninvited and abducted seven women from the PatanowÃ-tedi. This ultimately provoked a war between the PatanowÃ-tedi and Monou-tedi, and determined the settlement pattern of both groups, as well as their political activities, all during my field work. The war was still being actively prosecuted when I

726 left the field in February 1966, and had by that time in-
114 volved the Bisaasi-tedi.

B. The Effects of Warfare On Settlement Pattern and Economic Practices[1]

*621 When feuds, usually over women, can not be resolved
628 peacefully, club fights between the supporters of the woman's
837 lover and husband develop, leading to village splits and the
578 establishment of mutually hostile, independent villages. The
721 timing of the split, however, is determined by the nature of
[241] Yąnomamö agriculture: unless a large village has two gardens
separated by a considerable distance, the factions in the
feud can not separate to form independent villages.

*628 The situation is similar with respect to inter-village
726 warfare and village movement. The Yąnomamö depend to such an
722 extent on their cultivated foods that their pattern of warfare
241 necessitates the formation of political alliances with other
361 groups. Occasionally members of a village find themselves in
a situation where they have no choice except to move into the
village of an ally and depend on the produce of the latter's
garden. For the most part, the Yąnomamö attempt to avoid

---

[241] [361] [171] [128] [1] Yąnomamö economy deserves intensive treatment, as certain groups of Yąnomamö practice 'pioneering' slash-and-burn cultivation, i.e., are moving into unoccupied territory. In this, they exhibit some interesting parallels to, and differences from, the Iban of Sarawak (Freeman, 1955. See also Carneiro, 1956 and Conklin, 1961 on shifting cultivation). For the purposes of this dissertation, however, I am concerned only with the general limitations that Yąnomamö economic practices impose on settlement pattern and how these practices affect Yąnomamö social organization.

these situations[1] by establishing new gardens as new wars develop; occasionally, however, the wars take on unpredictable intensity before new gardens can be established, and the members of the villages concerned necessarily seek refuge with their allies.

To the Yąnomamö, gardens (hikari) are the fount of subsistence. They acknowledge the relationship between chronic warfare and village relocation by being constantly on the lookout for new lands to settle. Men are always discussing the agricultural merits of the forested areas in which they hunt, and most new sites are selected on the basis of information collected by hunters. Thus, when the Namowei-tedi split up at Patanowë-tëka, the Bisaasi-tedi faction moved to Shihota, an area they knew well because they customarily hunted there.[2] In 1965 the Monou-tedi cleared a new garden at Moyanabŏwei for the same reason. I accompanied hunting parties from Bisaasi-tedi on several occastions to new areas not normally frequented by these hunters, and the topic of agriculture invariably came up during the evening résumé of the day's experiences.

Other factors besides density of jungle, type of floral association, and general topography are considered by

[1] They avoid these situations because the hosts usually demand either sexual access to the women of the refugees, or wives for their bachelors. The refugees, of course, are reluctant to do either, but are frequently obliged to do both. The cost of the alliance, once again, is measured in terms of women lost.

[2] See Map C, and Chapter 5.

I. Marriage Ties

602 593 581 583 [609] Marriages bind the groups of the spouses to each other in a system of exchanges involving goods, services, and the promise to reciprocate women at a later date. Yąnomamö marriage is peculiar in that the ties between husband and wife are very weak, but that ties between a man and his sister's husband are strong. The significance of marriage as an institution that initiates (or continues) alliances between non-agnatic groups stems, therefore, from the nature of the ties that it creates between the male members of the allied groups.

593 Ties between spouses are usually very tenuous, due largely to the fact that men are constantly suspicious of their wives' motives whenever the women leave the village unescorted. Men always suspect their wives of infidelity, and will even beat them if there is the slightest suspicion that the women have been seeing other men. A certain amount of 839 593 trysting goes on in all villages, but it is more frequent and more easily accomplished in larger villages. Discovery of [578] liaisons by the cuckold inevitably leads to club fighting between the factions of the lover and the husband. The woman 593 684 involved usually suffers more than either of the male principals in the fighting that follows, as women are severely punished by their husbands. The punishment usually consists of a beating with a club, but men frequently shoot their unfaithful wives with barbed arrows in a non-vital area of the body, such as the buttocks or leg. In one instance I witnessed,

128 extending the model one more generation, maintaining the pattern already shown in the model, the numbers of individuals included in the new figure would approach the size of a small Yanomamö village. But, by extending the model one generation, we begin to put stress on one of the relationships, the tie between agnates of the same age, if we simultaneously introduce additional factors such as a sex ratio greater than 1.0. I can illustrate the same stress in Figure 1 by assuming that polygyny occurs. Presume that individual $A_{2.1}$ is older than his brother and is given both of the daughters of $B_{1.2}$ for his wives. As individual $A_{2.2}$ gets older, he will have no sexual alternative but to seek liaisons with the wives of his older brother, as all other women in the diagram stand in incestuous relationship to him. In Figure 1 $A_{2.1}$ and $A_{2.2}$ are drawn as full brothers. When situations of this sort occur, the older brother may give one of his wives to the younger brother, or at least permit him to have sexual relationships with one of them until he procures his own wife. If, however, we extend Figure 1 by another generation and specify the same conditions in Generation 3, the males involved are one degree of relationship more remote from each other. Were we to introduce the factor of woman shortage in addition to polygyny, the rivalry between agnates for the women in Generation 3 would increase accordingly, and fighting would likely result: distantly related agnates of the same age are ambiguously related to each other regarding both the disposition of women and acquisition of women for spouses.

accusations of sorcery or by the desire to abduct women.

Another major difference between the Uraricaá and the Mavaca Yąnomamö is the manner in which they treat extra-marital liaisons. On the Uraricaá, liaisons are tacitly permitted and fighting rarely develops between a man and his wife's lover. Should fighting occur, it is generally caused by some incident unrelated to the affair itself. In short, men permit their wives to have extra-marital affairs, provided the women are discreet.

Of major analytical significance is the fact that the Uraricaá Yąnomamö closely adhere to their rules of ambilateral cross-cousin marriage.[1] This stems from the fact that political alliances between villages there never involve the transfer of women from one group to the other. The Yąnomamö of the Uraricaá are endogamous within each congeries of villages having a common history. It would seem, therefore, that the absence of intensive warfare permits marriage practice to follow marriage rules.

The Uraricaá settlement pattern and village organization differ considerably from those found among the Yąnomamö of the Mavaca basin. What I have called a small village of 40 people among the latter segments, on the Uraricaá, into clusters of extended family units separated from each other by as much as half a mile (Migliazza, 1964). The village in which Migliazza lived, for example, comprised 80 persons

---

[1] Migliazza was not able to give me statistical data on actual marriage practices. I intend to collect this kind of information in January-February 1967 when I visit the Uraricaá area.

relationship between the shortage of women and the initiation of inter-village hostilities.[1]

One conclusion I reach, therefore, is that the frequency of hostilities within and between villages varies directly with the opportunities for males to satisfy their sexual desires in a socially acceptable way. In other words, internal village fighting and inter-village warfare should diminish in proportion to the increase in number of women to which each man has sexual access. Several kinds of data support this conclusion. First, the histories of the five villages and the data on village movements and warfare during 1964-66 show that most village splitting and most village warfare arise from feuds over women. Second, there was no fighting within Lower Bisaasi-tedi during the 15 months of my field work. This village has no adult bachelors, and has a male/female sex-ratio close to 1.0. Third, when missionaries changed the Yąnomamö attitudes toward coitus with pregnant and lactating women in one village, internal feuding reduced markedly.[2] Fourth, the data from the Uraricaá Yąnomamö on extra-marital sexual relationships imply that

---

[1] I cite this incident because it is an unambiguous--perhaps even classic--example of a war developing due to a shortage of women. I am in no sense criticizing the missionaries; they can not be held responsible for the violent nature of their charges in this or any other case. Their kindness and good example have, in a number of cases with which I am familiar, prevented bloodshed among the Indians.

[2] Personal communication from Mr. Wallace Jank, a New Tribes Missionary working among the Yąnomamö on the Padamo River.

fighting and warfare are reduced when the available women carry on affairs. Thus, I conclude that any factor which increases the sexual activity of females or increases the female/male ratio reduces the frequency of fighting.

The second conclusion I reach is that Yąnomamö marriage practices can be predicted, in a broad sense, once the conditions of warfare are specified. The greater the intensity of warfare, the more marriage practice will deviate from the preferred types. This follows from the fact that the Yąnomamö are forced to base military alliances on exchanges of women, limiting the degree to which ideal marriage preferences are expressed in practice.

We may now turn to a more theoretical discussion. Writing on the functional significance of marriage ties, Leach (1957) drew attention to the importance of economic factors in the integration of affinally-linked corporate descent groups, concluding that such integration as did occur was due largely to the delayed payment of bride price. The existence of this debt had the effect of consolidating the weak affinal ties, for the debtor group was economically bound to the bride-giving group. Although it has been shown above that the solidary ties between any affinally-linked Yąnomamö descent groups are due largely to military, marital and economic obligations, the problem of the lack of solidarity between agnatically related descent groups has not been satisfactorily explained. The instability of relationships between agnatic Yąnomamö corporate descent groups can be reduced to

11: Chagnon E-5 (1964-1968) 1968 SQ18 Yanoama SQ18

They enjoyed watching me learn these names. I assumed, wrongly, that I would get the truth to each question and that I would get the best information by working in public. This set the stage for converting a serious project into a farce. Each informant tried to outdo his peers by inventing a name even more ridiculous than what I had been given earlier, or by asserting that the individual about whom I inquired was married to his mother or daughter, and the like. I would have the informant whisper the name of the individual in my ear, noting that he was the father of such and such a child. Everybody would then insist that I repeat the name aloud, roaring in hysterics as I clumsily pronounced the name. I assumed that the laughter was in response to the violation of the name taboo or to my pronunciation. This was a reasonable interpretation, since the individual whose name I said aloud invariably became angry. After I learned what some of the names meant, I began to understand what the laughter was all about. A few of the more colorful examples are: "hairy vagina," "long penis," "feces of the harpy eagle," and "dirty rectum." No wonder the victims were angry.

I was forced to do my genealogy work in private because of the horseplay and nonsense. Once I did so, my informants began to agree with each other and I managed to learn a few new names, real names. I could then test any new informant by collecting a genealogy from him that I knew to be accurate. I was able to weed out the more mischievous informants this way. Little by little I extended the genealogies and learned the real names. Still, I was unable to get the names of the dead and extend the genealogies back in time, and even my best informants continued to deceive me about their own close relatives. Most of them gave me the name of a living man as the father of some individual in order to avoid mentioning that the actual father was dead.

The quality of a genealogy depends in part on the number of generations it embraces, and the name taboo prevented me from getting any substantial information about deceased ancestors. Without this information, I could not detect marriage patterns through time. I had to rely on older informants for this information, but these were the most reluctant of all. As I became more proficient in the language and more skilled at detecting lies, my informants became better at lying. One of them in particular was so cunning and persuasive that I was shocked to discover that he had been inventing his information. He specialized in making a ceremony out of telling me false names. He would look around to make sure nobody was listening outside my hut, enjoin me to never mention the name again, act very nervous and spooky, and then grab me by the head to whisper the name very softly into my ear. I was always elated after an informant session with him, because I had several generations of dead ancestors for the living people. The others refused to give me this information. To show my gratitude, I paid him quadruple the rate I had given the others. When word got around that I had increased the pay, volunteers began pouring in to give me genealogies.

I discovered that the old man was lying quite by accident. A club fight broke out in the village one day, the result of a dispute over the possession of a woman. She had been promised to Rerebawä, a particularly aggressive young man who had married into the village. Rerebawä had already been given her older sister and was enraged when the younger girl began having an affair with another man in the village, making no attempt to conceal it from him. He challenged the young man to a club fight, but was so abusive in his challenge that the opponent's father took offense and entered the village circle with his son, wielding a long club. Rerebawä swaggered out to the duel and

11: Chagnon E-5 (1964-1968) 1968 SQ18 Yanoama SQ18

114 hurled insults at both of them, trying to goad them into striking him on the head with
123 their clubs. This would have given him the opportunity to strike them on the head. His
124 opponents refused to hit him, and the fight ended. Rerebawä had won a moral victory
578 because his opponents were afraid to hit him. Thereafter, he swaggered around and in-
839 sulted the two men behind their backs. He was genuinely angry with them, to the point of calling the older man by the name of his dead father. I quickly seized on this as an opportunity to collect an accurate genealogy and pumped him about his adversary's ancestors. Rerebawä had been particularly nasty to me up to this point, but we became staunch allies: We were both outsiders in the local village. I then asked about other dead ancestors and got immediate replies. He was angry with the whole group and not afraid to tell me the names of the dead. When I compared his version of the genealogies to that of the old man, it was obvious that one of them was lying. I challenged his information, and he explained that everybody knew that the old man was deceiving me and bragging about it in the village. The names the old man had given me were the dead ancestors of the members of a village so far away that he thought I would never have occasion to inquire about them. As it turned out, Rerebawä knew most of the people in that village and recognized the names.

114 I then went over the complete genealogical records with Rerebawä, genealogies I
124 had presumed to be in final form. I had to revise them all because of the numerous lies and falsifications they contained. Thus, after five months of almost constant work on the genealogies of just one group, I had to begin almost from scratch!

114 Discouraging as it was to start over, it was still the first real turning point in my
123 fieldwork. Thereafter, I began taking advantage of local arguments and animosities in
124 selecting my informants, and used more extensively individuals who had married into the group. I began traveling to other villages to check the genealogies, picking villages that were on strained terms with the people about whom I wanted information. I would then return to my base camp and check with local informants the accuracy of the new information. If the informants became angry when I mentioned the new names I acquired from the unfriendly group, I was almost certain that the information was accurate. For this kind of checking I had to use informants whose genealogies I knew rather well: they had to be distantly enough related to the dead person that they would not go into a rage when I mentioned the name, but not so remotely related that they would be uncertain of the accuracy of the information. Thus, I had to make a list of names that I dared not use in the presence of each and every informant. Despite the precautions, I occasionally hit a name that put the informant into a rage, such as that of a dead brother or sister that other informants had not reported. This always terminated the day's work with that informant, for he would be too touchy to continue any further, and I would be reluctant to take a chance on accidentally discovering another dead kinsman so soon after the first.

114 These were always unpleasant experiences, and occasionally dangerous ones, de-
123 pending on the temperament of the informant. On one occasion I was planning to visit
124 a village that had been raided about a week earlier. A woman whose name I had on my
551 list had been killed by the raiders. I planned to check each individual on the list one by one to estimate ages, and I wanted to remove her name so that I would not say it aloud in the village. I knew that I would be in considerable difficulty if I said this name aloud so soon after her death. I called on my original informant and asked him to tell

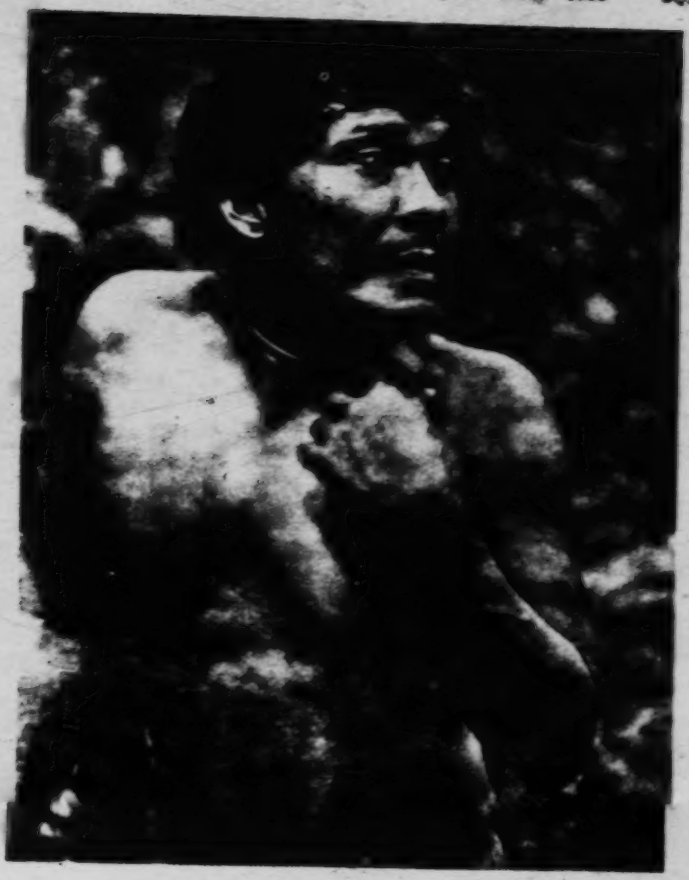

Fig. 1-3. Kąobawä, the wise leader, listens to identify a strange noise in the jungle.

I spent a good deal of time with these two men and their families and got to know them well. They frequently gave their information in a way which related themselves to the topic under discussion. We became very close friends. I will speak of them frequently in the following chapters, using them as "typical" Yąnomamö, if, indeed, one may speak of typical anything. I will briefly comment on what these men are like and their respective statuses in the village.

Kąobawä is about 40 years old (Fig. 1-3). I say "about" because the Yąnomamö numeration system has only three numbers: one, two, and more-than-two. He is the headman of Upper Bisaasi-teri. He has had five or six wives so far and temporary affairs with as many more women, one of which resulted in a child. At the present time he has just two wives, Bahimi and Koamashima. He has had a daughter and a son by Bahimi, his eldest and favorite wife. Koamashima, about 20 years old, recently had her first child, a boy (Fig. 1-4). Kąobawä may give Koamashima to his youngest brother. Even now the brother shares in her sexual services. Kąobawä recently gave his third wife to another of his brothers because she was beshi: "horny." In fact, this girl had been married to two

11: Chagnon E-6 (1964-1968) 1988 SQ18 Yanoama SQ18

115

other men, both of whom discarded her because of her infidelity. Kąobawä had one daughter by her; she is being raised by his brother.

Kąobawä's eldest wife, Bahimi, is about thirty-five years old. She is his first cross-cousin (see Glossary). Bahimi was pregnant when I began my fieldwork, but she killed the new baby, a boy, at birth, explaining tearfully that it would have competed with Ariwari, her nursing son, for milk. Rather than expose Ariwari to the dangers and uncertainty of an early weaning, she killed the new child instead. By Yąnomamö standards, she and Kąobawä have a very tranquil household. He only beats her once in a while, and never very hard. She never has affairs with other men.

[849]
[593]
[839]

Kąobawä is quiet, intense, wise, and unobtrusive. He leads more by example than by threats and coercion. He can afford to be this way as he established his reputation

[822]

115 for being fierce long ago, and other men respect him. He also has five mature brothers
[622] who support him, and he has given a number of his sisters to other men in the village,
[156] thereby putting them under some obligation to him. In short, his "natural" following (kinsmen) is large, and he does not have to constantly display his ferocity. People already respect him and take his suggestions seriously.

Rerebawä is much younger, only about twenty-two years old (See Fig. 1-3). He has just one wife by whom he has had three children. He is from Karohi-teri, one of the
[582] villages to which Kaobawä's is allied. Rerebawä left his village to seek a wife in Kaobawä's group because there were no eligible women there for him to marry.

[156] Rerebawä is perhaps more typical than Kaobawä in the sense that he is concerned about his reputation for ferocity and goes out of his way to act tough. He is, however, much braver than the other men his age and backs up his threats with action.
[622] Moreover, he is concerned about politics and knows the details of intervillage relationships over a large area. In this respect he shows all the attributes of a headman, although he is still too young and has too many competent older brothers in his own village to expect to move easily into the position of leadership there.

[583] He does not intend to stay in Kaobawä's group and has not made a garden. He
[591] feels that he has adequately discharged his obligations to his wife's parents by providing them with fresh game for three years. They should let him take the wife and return to his own village with her, but they refuse and try to entice him to remain permanently in Bisaasi-teri to provide them with game when they are old. They have even promised to give him their second daughter if he will stay permanently.

Although he has displayed his ferocity in many ways, one incident in particular shows what his character is like. Before he left his own village to seek a wife, he had an
[837] affair with the wife of an older brother. When he was discovered, his brother attacked
[593] him with a club. Rerebawä was infuriated so he grabbed an axe and drove his brother
[578] out of the village after soundly beating him with the flat of the blade. The brother was so afraid that he did not return to the village for several days. I recently visited his village with him. He made a point to introduce me to this brother. Rerebawä dragged him out of his hammock by the arm and told me, "This is the brother whose wife I had an affair with," a deadly insult. His brother did nothing and slunk back into his hammock, shamed, but relieved to have Rerebawä release the vise-grip on his arm.

[829] Despite the fact that he admires Kaobawä, he has a low opinion of the others in Bisaasi-teri. He admitted confidentially that he thought Bisaasi-teri was an abominable group: "This is a terrible neighborhood! All the young men are lazy and cowards and everybody is committing incest! I'll be glad to get back home." He also admired Kaobawä's brother, the headman of Monou-teri. This man was killed by raiders while I was doing my fieldwork. Rerebawä was disgusted that the others did not chase the raiders when they discovered the shooting: "He was the only fierce one in the whole group; he was my close friend. The cowardly Monou-teri hid like women in the jungle and didn't even chase the raiders!"

[156] Even though Rerebawä is fierce and capable of being quite nasty, he has a good
[522] side as well. He has a very biting sense of humor and can entertain the group for hours on end with jokes and witty comments. And, he is one of few Yanomamö that I feel I can trust. When I returned to Bisaasi-teri after having been away for a year, Rerebawä was in his own village visiting his kinsmen. Word reached him that I had returned, and

*621 *623 Village size is an important factor in determining the degree to which a Yąnomamö group must depend on its neighbors for military support in the face of raids. Small villages must make alliances to survive. Village size, as I mentioned in Chapter 1, ranges *621 701 722 from 40 to 250 inhabitants. Approximately one-third of the village consists of males who are able to participate in the raiding, that is, men who are between 17 and 40 years old. The tactics of warfare are such that a village must be able to field a raiding party of approximately 10 men in order to be able to raid effectively. In addition, when the raiders are away, there must always be a few men at home to protect the women and children. Thus, the military requirements alone seem to demand that a village have at least 15 able-bodied men. As these represent about a third of the group, the minimum village size required by the raiding techniques is 40 to 50 people. I have never seen a village fall below this size in an area where raiding is active, and virtually every village split I investigated took place only when each of the resulting groups contained 40 or more people.

*621 721 726 The upper limit to village size is also determined in large measure by the intensity of warfare. The village of Patanowä-teri, for example, has over 200 people. It was being raided actively by about a dozen different groups while I conducted my fieldwork, groups that raided it about twenty-five times in a period of fifteen months. The Patanowä-teri at one time had split into three groups of about equal size, but raids from their enemies forced them to reunite for common defense. In general, a village will fission after it [578] reaches a population of about 150 because internal feuds and fights are so frequent that peace can only be maintained with great difficulty. A village of 100 individuals, for example, can fission to produce two militarily viable groups of about 50 people each. Only the threat of raids from powerful neighbors will, as in the case of the Patanowä-teri, inhibit the fissioning, and frequently the fission groups will reunite in a single village to fend off the raids of their enemies.

* [628] But a small group of 40 to 50 people is not as viable as a group twice that size. Consequently, it enters into alliances with its neighbors.

*621 582 166 FISSION AND SETTLEMENT There is a tendency for the group to attempt to maximize its size after it becomes an independent entity. This is done by trying to keep all marriages within the group so that there is very little migration of young men and women to other villages after marriage. A small group also welcomes the addition of families from other villages, families that have gotten into fights in their own group and who prefer to leave rather than attempt to patch up their grievances with their kinsmen. Finally, the group tries to attract young men and women from other villages, encouraging them to settle permanently in the group. Rerebawä, for example, is under considerable pressure to remain permanently in Kąobawä's group.

*621 578 ♥837 As the village grows in size and varies in composition, it becomes increasingly difficult to keep order and peace. Extramarital sexual liaisons are more frequent in larger villages, because the probability is lower that the affairs will be discovered. When the Monou-teri rejoined Kąobawä's group to avoid the raids of their enemies, a bloody club fight developed between two men of that village over an affair one of them had with the other's wife. The culprit waited until the group joined Kąobawä's village before approaching the woman, thinking that with so many people in one village he would not be caught.

By the time a village approaches 100 to 150 people, such fights over women are

11: Chagnon E-5 (1964-1968) 1968 SQ18 Yanoama SQ18

so frequent that the group elects to fission rather than attempt to keep an uneasy internal peace. Although a larger village has an advantage in terms of its capacity to raid other groups and is better able to defend itself from raids, the internal fights often lead to killings within the group. Then, there is no alternative but for one of the factions to leave. Its members may anticipate a situation like this and begin making a new garden long before the fighting becomes violent enough to lead to deaths, or a fight can develop unexpectedly and result immediately in bloodshed. The guilty faction must then seek refuge in the village of an ally until it can establish its own garden. Usually, however, the larger group fissions while its members are on relatively peaceable terms, and the two resulting villages remain in the same general area so that they can reunite when raids threaten them. This is the situation that prevails between Upper and Lower Bisaasi-teri and Monou-teri; all three have a common history as a single village, but the members of each live in separate villages because of the numerous fights that took place within the group while they were still a single village. They continue, however, to rely on each other for protection when raids threaten. The Monou-teri (see Fig. 2–8), in fact, spent about a third of their time in either Lower Bisaasi-teri or in Kąobawä's group while I conducted my fieldwork. They were being raided by the Patanowä-teri and had not completed the new garden they were making. The Patanowä-teri forced them to abandon their producing site and move west.

The Patanowä-teri themselves were forced to establish a new garden because of the incessant raids by a number of villages. In addition to keeping always on the move between their two gardens, they also sought periodic refuge in the village of one of their own allies, a village two days travel to the south of their primary garden.

The raids against the Patanowä-teri by about a dozen villages illustrate a cardinal strategy of Yąnomamö warfare: attack a group when it is beleaguered and weakened by other enemies. When I first arrived, the Patanowä-teri were fighting only three groups. The Monou-teri then entered into the conflict by abducting a number of women from them, an act that ultimately led to raiding and killing. When the Monou-teri entered the conflict, they also persuaded their own allies to participate, bringing four other villages into the war. These, in turn, were joined by some of their allies so that the total number of belligerent villages rapidly grew to about a dozen. Many of them joined the hostilities because they knew that the Patanowä-teri could not defend themselves against a host of enemies. The new belligerents, therefore, stood a good chance of abducting women while being relatively immune to punitive raids. They could also discharge obligations to their allies by supporting their raids against the Patanowä-teri without exposing themselves to great danger.

In Fig. 2–8 the movements of Kąobawä's village over the past seventy-five years is summarized. The village originated at the site of Konata, occupied prior to 1900 by Kąobawä's grandfather. This site was abandoned because several villages (not indicated on the map) began raiding the people with such frequency that they were forced to flee south, cross the Orinoco River, and take refuge with allies at a place called Wareta. Similarly, Wareta was abandoned because of new wars, so the group again crossed the Orinoco River and settled at Namowei. Here, their old enemies again drove them out of the area, so the group migrated to Hąhoyaoba. Kąobawä was born at this location, some forty years ago. This site was abandoned because the soil in that area was very poor; even to this day, there are no Yąnomamö villages located in that general area.

11: Chagnon E-5 (1964-1968) 1968 SQ18 Yanoama SQ18

Upper Bisaasi-teri, and Lower Bisaasi-teri (see Table 1). Politically, they are either the two dominant lineages in each of the above-named villages or one of the two dominant lineages. For example, the headmen of Upper and Lower Bisaasi-teri, Kąobawä and Reromauwä, respectively, come from the *Sha* lineage. In Patanowä-teri there are two headmen, one from the *Sha* lineage and one from the *Hor* lineage. Finally, in Monou-teri, the headmanship shifted from the *Sha* lineage to the *Hor* lineage in 1965 because the *Sha* headman was killed in a raid by men from Patanowä-teri. I might add that he was killed by men of his own lineage to whom he was related as "brother." After he died, his brother-in-law, of the *Hor* lineage, assumed the leadership. It is not surprising that the headmanship shifted to this large, important group. In terms of sheer numbers, the *Hor* lineage (see Table 3–1) was stronger than the *Sha* lineage in Monou-teri. The distribution of political power within these two lineages underscores the dual organization of most Yąnomamö villages.

It is apparent from the foregoing example that the ties between agnates who live in different villages are not necessarily amicable. The most bitter fighting, in fact, takes place between members of different villages who are related to each other agnatically. It is not uncommon for men to kill their classificatory brothers in the ensuing raids. As a consequence of the killing of the Monou-teri headman, for example, the raiders from Monou-teri avenged his death by shooting Bosibrei of Patanowä-teri. The two men who actually killed Bosibrei were related to their victim as brothers. Similarly, Kąobawä himself shot Rakoiwä, the present *Sha* headman of Patanowä-teri, wounding him badly. He had shot to kill even though Rakoiwä was his older (classificatory) brother.

Once the lineage splits up and is redistributed in several villages, the ties between the men of that lineage weaken dramatically. And, as we shall see below, the fissioning of a village is frequently the result of a bitter club fight within the village over the possession of women. The result is that many villages that have a common history are at war with each other due to the nature of the feuds that led to their splitting away from the common village. The Patanowa-teri, for example, are at war with all three of the villages from which they originally separated (see Fig. 3–5, discussed later).

The kinship ties between agnates who live in the same village are likewise quite weak. They are strongest between a man and his younger brothers, for the age differences alone call forth a certain amount of respect and amity. An older man can be expected to aid his younger brothers in fights and help them to secure wives. In some cases, the younger man obtains his wife from a polygynous older brother; some men appear to accumulate extra wives with the intention of passing them on to their younger brothers. Kąobawä, for example, gave one of his wives to a younger brother and will probably give another wife to a second younger brother. (He is presently permitting the brother to share her sexual services.) Kąobawä's older wife, Bahimi, is quite jealous of the co-wives because they can command some of the tasty morsels of food that would otherwise be her own prerogative. And, since the younger wives are more attractive physically, Kąobawä does pay considerable attention to them. In Lower Bisaasi-teri, one of Kąobawä's classificatory brothers was forced by his older wife to get rid of his young, attractive second wife. The man gave her to an unmarried younger brother. He himself had acquired the younger wife as part of a political alliance he had made with the members of an allied village, knowing at the time that his first wife would object strenuously to the

11: Chagnon E-5 (1964-1968) 1968 SQ18 Yanoama SQ18

sexually active females. Some of the teen-age males have homosexual affairs with each other; the females of their own age are usually married. By the time a young man is twenty years old or so he is anxious to display his masculinity, and at that point becomes a competitor for the sexual favors of the village belles—married belles. This causes considerable friction and results in club fighting. (See Chapter 5.)

Still another factor leads to breeches of the marriage rule: chance. In some villages there are disproportionately more males (or females) of the same lineage because of the way in which the group split from a different village. Again, there may be no eligible females when a young man is old enough to marry. His only choice is to seek a wife in a different village. Rerebawä, for example, was forced into this situation. His own village is quite small (about 50 people), but it is dominated numerically by members of his own lineage. Hence, most of the females in the village are related to him as mother, sister, or daughter. The remaining females are married to his older brothers. He therefore came to Upper Bisaasi-teri—an ally of his village—to seek a wife.

Thus, political necessity, cultural practices relating to population control, unequal distribution of women, and chance combine to produce situations in which people cannot follow their prescriptive marriage rules. The factors dealing with politics are the most meaningful in explanations of the discrepancy between Yąnomamö marriage behavior and ideal models of that behavior.

POLITICAL BASIS The importance of politics can be demonstrated by citing a few incidents in the history of several villages and explaining how alliances and hostilities develop over time.

In Chapter 1 I briefly described the political milieu within which Kąobawä's village was situated. The relationships that exist at the present time make considerably more sense when they are viewed in the perspective of the historical events that led up to them. The reasons for village fissions and wars and why particular villages have entered into alliances with each other will now be explored briefly.[14]

The more important political ties currently maintained by Kąobawä's group have antecedents that go back to approximately 1940. At that time the present villages of Patanowä-teri, Monou-teri, and Upper and Lower Bisaasi-teri were one large village (see Fig. 2–8). In 1940, they were known collectively as the Patanowä-teri. To their south was a series of villages whose residents are collectively known as the Shamatari people. The Patanowä-teri were on friendly terms with most of the Shamatari and frequently visited them in order to trade. Just prior to 1940, an epidemic, probably malaria, resulted in the deaths of a number of Patanowä-teri. The Shamatari were suspected of causing the epidemic by practicing harmful magic. The first Shamatari man to visit the village after the epidemic, Ruwahiwä, was treacherous killed by a man who presently lives in Monou-teri; he bashed his head open with an axe. This immediately precipitated a war between the Patanowä-teri and several of the Shamatari villages.

A few years after the war started the Patanowä-teri fissioned into two groups: They relocated their gardens, but remained fairly close to each other geographically. This split was caused by constant bickering within the group and club fights over women. The two new villages thus formed were friendly enough to each other to live in the same

[14] I discussed these relationships in considerable detail in my doctoral dissertation, Chagnon, 1966. The following account is a simplified version.

137

Fig. 3-6. Women hauling firewood from the jungle to the village at dusk.

for suitable wood. There is usually an abundant supply in the garden within a year of the clearing of the land, but this disappears rapidly. Thereafter, the women must forage further afield to collect the daily supply of firewood, sometimes traveling several miles each day to obtain it. It is a lucky woman who owns an axe, for collecting wood is a tedious job without a steel tool. The women can always be seen at dusk, returning to the village in a procession, bearing enormous loads of wood in their pack-baskets (see Fig. 3-6). Good planners will spend a great deal of time collecting wood on some days so that they can take a vacation from this chore on others. If a woman locates a good supply of wood near the village, she will haul as much as she can and store it rather than let it be taken by her covillagers.

462 313 [482]

Women must respond quickly to the demands of their husbands. In fact, they must respond without waiting for a command. It is interesting to watch the behavior of women when their husbands return from a hunting trip or a visit. The men march slowly across the village and retire silently to their hammocks. The woman, no matter what she is doing, hurries home and quietly but rapidly prepares a meal for the husband. Should the wife be slow in doing this, the husband is within his rights to beat her. Most reprimands meted out by irate husbands take the form of blows with the hand or with a piece of firewood, but a good many husbands are even more brutal. Some of them chop their wives with the sharp edge of a machete or axe, or shoot them with a barbed arrow in some nonvital area, such as the buttocks or leg. Many men are given over to punishing their wives by holding the hot end of a glowing stick against them, resulting in serious burns. The punishment is usually, however, adjusted to the seriousness of the wife's shortcomings, more drastic measures being reserved for infidelity or suspicion of infidelity.

593 462 [252] 593 164 [537]

11: Chagnon E-5 (1964-1968) 1968 SQ18 Yanoama SQ18

men built his own section of the village, but in such a way that the roofs coincided and could be attached by simply extending the thatching. When completed, the village looked like a continuous, oval-shaped lean-to because of the way in which the roofs of the discrete houses were attached. Each house, however, is owned by the family that built it. Shararaiwä, Kąobawä's youngest brother, helped build Kąobawä's house and shares it with him. He also shares Koamashima, Kąobawä's younger wife. Kąobawä's older wife, Bahimi, hangs her hammock adjacent to Kąobawä's most of the time, but when there are visitors and the village is crowded, she ties her hammock under his in order to be able to tend the fire during the night. Ariwari still sleeps with his mother, but will get his own hammock soon: He is nearly four years old. His parents are afraid he will fall into the fire at night and get burned, since he is still a little too young to sleep alone.[21]

Daily activities begin early in a Yąnomamö village. One can hear people chatting lazily and children crying long before it is light enough to see. Most people are waked by the cold and build up the fire just before daybreak. They usually go back to sleep, but many of them visit and talk about their plans for the day.

The entrances are all covered with dry brush so that any movement of people through them is heard all over the village. There is always a procession of people leaving the village at dawn to relieve themselves in the nearby garden, and the noise they make going in and out of the village usually awakens the others.

The village is very smoky at this time of day, since the newly [illegible] campfires smoulder before they leap into flames. The air is usually very still and [illegible] and the ground is damp from the dew. The smoke is pleasant and seems to drive away the coolness.

Clandestine sexual liasons usually take place at this time of day, having been arranged on the previous evening. The lovers leave the village on the pretext of going to the bathroom and meet at some predetermined location. They return to the village by opposite routes.

This is also the time of day when raiders strike, so people must be cautious when they leave the village at dawn. If there is some reason to suspect raiders, they do not leave the confines of the upright log palisade that surrounds the village. They wait instead until full light and leave the village in armed groups.

By the time it is light enough to see, everybody has started preparing breakfast. This consists largely of roasted green plantains, easily prepared and steaming hot. If the family has any meat, it is taken down and shared, the children getting the best portions. Leftover meat is hung over the fire by a vine to keep the vermin off it and to preserve it.

If any of the men have made plans to hunt that day, they leave the village before it is light. Wild turkeys can be easily taken at this time of day because they roost in conspicuous places. During the dry season the *hashimo* (a kind of grouse) sing before dark and can be readily located. If any were heard the night before, the men leave at dawn to stalk them.

Tobacco chewing starts as soon as people begin stirring. Those who have fresh

[21] A child fell into a fire and burned to death in 1966—the mother had placed her hammock too close to the fire in order to keep warm, and the baby slipped from her arms while she slept. Bahimi's mother also sleeps in Kąobawä's house, but he does not have to avoid her because she is an old woman.

11: Chagnon E-5 (1964-1968) 1968 SQ18 Yanoama SQ18

him that it was used by people of my "group" when they went on raids against their enemies, his interest shifted to our military exploits.

"Who did you raid?" he asked.

"Germany-teri."

"Did you go on the raid?"

"No, but my father did."

"How many of the enemy did he kill?"

"None."

"Did any of your kinsmen get killed by the enemy?"

"No."

"You probably raided because of woman theft, didn't you?"

"No."

At this answer he was visibly disturbed. He chatted for a moment with the others, seeming to doubt my answer.

"Was it because of witchcraft?" he then asked.

"No," I replied again.

"Ah! Someone stole cultivated food from the other!" he exclaimed, citing confidently the only other incident that is deemed serious enough to provoke man to wage war.

Perhaps the best way to illustrate Yąnomamö warfare, its causes, and the techniques of raid is to give a history of the recent military activities of Monou-teri, a small village that split away from Kąobawä's group in the mid-1950s.

A Specific War

The headman of the village, whom I shall call Damowä (since he was recently killed by raiders), was a particularly aggressive man. According to Rerebawä, Damowä was the only fierce man in the entire village, the true *waiteri* (fierce one) of the group.

Damowä had a habit of seducing the wives of other men, a factor that led to frequent feuding in the village and resulted in a number of club fights. Of the numerous affairs he had, two in particular illustrate the nature of possible consequences. His youngest brother was married to an abducted Shamatari girl. Damowä seduced her, thereby enraging his brother. The young man was afraid to vent his anger on the real culprit, his brother, so, instead, he shot his wife with an arrow. He intended only to wound her, but the arrow struck her in a vital spot and she died.

Manasinawä, a man of some fifty-five years at the present time, joined Damowä's group with his wife and young daughter. He fled from his own village in order to take refuge in a group that was raiding his own village, as he wanted to get revenge against them for a wrong they had committed. Damowä, who already had several wives, decided to take Manasinawä's wife from him and add her to his own family. This resulted in the final club fight that led to the separation of Kąobawä's group from the Monou-teri. Manasinawä's wife took the daughter and fled to yet another village. Kąobawä then organized a raid to recover the woman and child when their protectors refused to give them back. The two were taken by force from this group by Kąobawä's raiders. Nobody
